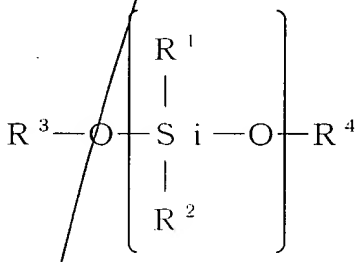
polycarbonate and at least one organic polymer resin other than an aromatic polycarbonate, wherein said resin mixture has an aromatic polycarbonate content of 50 % by weight or more,

said process comprising adding to said resin component (A) a flame retardant (B) comprising at least one aromatic group-containing silicone compound, and an additional flame retardant (C) comprising at least one member selected from the group consisting of a metal salt flame retardant, a phosphorus-containing flame retardant, a nitrogen-containing flame retardant, a silicon-containing flame retardant other than said silicone compound (B), an inorganic flame retardant and a fibrous flame retardant,

said at least one aromatic group-containing silicone compound (B) comprising a monomer, a polymer or a mixture thereof, which is represented by the following formula (1):



(1)

wherein:

each of R^1 and R^2 independently represents a

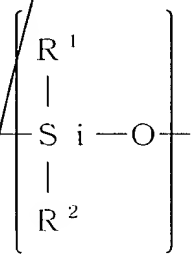
hydrogen atom or a monovalent C_1-C_{20} hydrocarbon group;

each of R^3 and R^4 independently represents a hydrogen atom; a monovalent C_1-C_{20} hydrocarbon group; a metal-containing monovalent group comprising a metal atom having bonded thereto at least one member selected from the group consisting of a hydrogen atom and monovalent C_1-C_{20} hydrocarbon groups;

at least one of R^1, R^2, R^3 and R^4 is a C_6-C_{20} aromatic group having a valence according to the definition of R^1, R^2, R^3 or R^4; and

n is 1 or more in terms of the number average n value,

wherein, when said flame retardant (B) is a polymer represented by formula (1) wherein n is 2 or more in terms of the number average n value, the recurring units, each represented by the following formula (3):



(3)

wherein each of R^1 and R^2 is as defined for formula

(1),

are the same or different, so that said flame retardant (B) is a homopolymer or a copolymer, wherein said copolymer has a random, a block or an alternating configuration,

wherein said flame retardant (B) contains said aromatic group in an amount of from 5 to 100 mole %, based on the total molar amount of R^1, R^2, R^3 and R^4;

wherein said flame retardant (B) is added in an amount of from 0.1 to 100 parts by weight and said additional flame retardant (C) is added in an amount of from 0.001 to 100 parts by weight, each relative to 100 parts by weight of said resin component (A).
